

## **Updating Topographic Map and Solving Problems**

**Guang WEN, China, PR**

Through our hard work for nearly twenty years, the topographic map of whole Yunnan Province with scale 1:10000 is about to complete. Surveyors are proud of this. During the nearly two-year's work, we touched gradually some areas which are surveyed before, and needed to be revised of their topographic map. During the work, some problems flow to the surface, therefore, we have to think about early how to solve difficult problems in renewing a lot of maps in the future.

The problems mentioned above are the situation when updating topographic maps have been touched or will be touched. There are must be problems not be think about yet which will be solved in future works
